SUMMARY

Senior Software Engineer with 7 years in games, focused on building the software other people use to make games: Unity Editor tooling, asset pipelines, developer-facing SDKs and APIs, and self-service authoring tools. Ship tools for artists, designers, engineers, and non-technical live-ops staff, working across game client and server code as well as platform backend services. Background shipping games across mobile, PC, and console, including sole ownership of Xbox and PlayStation ports through first-party certification.

PROFESSIONAL EXPERIENCE

Scopely — Senior Software Engineer, Platform Game Solutions

Mexico City, Mexico | September 2023 - Present

Build and integrate developer-facing platform tooling and SDKs for Scopely's game studios. Primary support for Marvel Strike Force, Star Trek Fleet Command, and WWE Champions; tools and SDKs also reach other titles across the portfolio, including Monopoly GO.

- Technical lead for Visual Editor, a self-service authoring tool that lets non-technical marketing and live-ops staff create and ship In-App Messages with no engineering involvement and no client release. Spanned four teams (platform web console, platform backend services, UX, and Marvel Strike Force as lead stakeholder).
 - Designed and built the translation layer converting console-authored message definitions into a format the platform rendering SDK consumes at runtime, and extended that SDK client-side to render it — delivering a new authoring surface entirely on existing infrastructure rather than new systems.
- Designed a new SDK API allowing games to apply their own texture import presets to textures the rendering SDK generates at runtime, reducing memory for those textures by 60%. Root-caused the issue from a profiling spike reported by the Marvel Strike Force team and solved it at the SDK layer so every integrating title benefited, not just the reporting one.
- Integrate platform SDKs and services directly into live game clients and servers. Most work extends existing systems owned by other teams, requiring rapid ramp-up in unfamiliar codebases without disrupting live players.
- Built backend integrations for Twitch Drops and Discord, extending existing platform services and improving client-to-service communication for live-ops campaigns.
- Contributed to an early-stage Unreal Engine SDK initiative, evaluating architecture, integration patterns, and platform requirements for future game teams.
- Mentor two mid-level engineers and drive engineering quality through technical design documents, design reviews, and code review for both internal and partner game teams.

Digital Vault Studio — Game Programmer

Mexicali, Baja California, Mexico | October 2021 - September 2023

- Built a Unity Editor asset pipeline tool that converted imported FBX models into game-ready prefabs in a single pass: applying established material and texture presets, generating colliders from mesh shape, registering entries in the ScriptableObject catalog, and exposing category and tuning fields for manual adjustment. Removed most per-model manual setup for a title requiring hundreds of unique 3D assets, and gave artists a repeatable path from DCC export to in-game object.
- Developed additional Unity Editor tooling to streamline art integration and level design workflows for artists and designers.
- Lead Developer on a 3D physics-driven match game under a licensed IP for Apple Arcade, owning core gameplay, UI, and system architecture in Unity from prototype through polish (cancelled pre-launch).
- Developed and optimized in parallel across four Apple platforms (iOS, iPadOS, tvOS, macOS) to meet Apple Arcade technical certification requirements.
- Shipped multiplatform releases for publishers including Tilting Point across Facebook Cloud, Microsoft Store, Amazon Appstore, and Apple Arcade. Titles: Adventure Escape Mysteries, M&M's Adventure, ASTROKINGS.

Seashell Studio — Game Programmer

Querétaro, Mexico | October 2019 - September 2021

- Shipped Lunch A Palooza to Steam, Xbox One, PlayStation 4, and Nintendo Switch.
- Sole engineer on the Xbox One and PlayStation 4 ports, owning development, build and release setup, QA, and certification feedback through to release approval on both platforms.
- Implemented platform-required services including achievements, cloud saves, and player profile management, meeting Xbox and PlayStation certification standards.

- Implemented and polished gameplay systems in Unity for 4-player local multiplayer: physics-driven combat, responsive UI, and multi-controller input handling.
- Contributed early development on Running Fable (Steam, console, mobile): terrain-aligned item placement, tutorial playground with onboarding flow, input handling, and online system bug fixes.

SELECTED PROJECTS

U.F.Ortnite — UEFN / Verse — Released April 2025

Solo developer

- Implemented a custom object pooling system in Verse to keep frame times stable across all supported platforms, working around the absence of a built-in pooling pattern in the language.
- Self-directed project to learn Verse and the UEFN toolchain; designed and shipped a complete arcade gameplay loop including score rank progression, enemy wave spawning, enemy behavior, level randomization, and animation.
- Owned the full lifecycle solo: gameplay scripting, UI, custom 3D models, QA, and release.

EDUCATION

Universidad Cuauhtémoc, Querétaro, Mexico

Bachelor of Interactive Digital Content | August 2017 - June 2021

TECHNICAL SKILLS

Languages: C#, C++, Java, Python, Lua, Verse

Engines: Unity, Unreal Engine 5, UEFN

Tooling and Pipelines: Unity Editor tooling, asset import pipelines, ScriptableObject-driven content workflows, developer-facing SDK and API design, self-service authoring tools, profiling and performance optimization

Platforms: iOS, iPadOS, tvOS, macOS, Android, Xbox, PlayStation 4, Nintendo Switch, Steam, Microsoft Store, Facebook Cloud, Amazon Appstore

Practices: Git, Perforce, CI/CD pipelines (releases, preview builds, automated testing), technical design documents, code review, cross-team collaboration, mentorship, Agile/Scrum

LANGUAGES

English: Fluent | Spanish: Native
